# What If Remote Collaboration Were Easier?

The amount of employees working remotely is rapidly increasing. Many businesses are discovering their existing technologies do not support collaboration or telework. Cloud Enterprise Content Management (ECM) helps teams collaborate effectively while working remotely, by offering secure access to information from anywhere, at anytime, on virtually any device.

40% of workers prefer to move to full-time remote work -Valoir, 2020

These four features make remote collaboration simple:

Full-text Search

Allows you to quickly find information based on any word or phrase.

Audit Reporting

Keeps track of who accesses each document, what they did with it, and why.

Document Encryption

Protects documents while being stored, shared and accessed.

Document Check Out/In

Provides a "master" version to be checked out for editing and to prevent overlapping effort.

How can effective collaboration improve performance?

"Companies that leverage collaboration as an organizational skill are 5x more likely to be high performing." – AIIM, 2019
