

How Are Robots Evolving the Workforce?

"70% of executives see RPA as an essential priority" –UI Path

Robotic Process Automation (RPA) helps organizations **"work smarter not harder"** by automating repetitive rules-based tasks normally performed by humans. Experts say RPA compliments humans by taking over tedious tasks, freeing them for more empowering work.

Over **80%** of organizations using **RPA** indicated a **happier workforce**. –Deloitte

88% of business leaders think **automation accelerates processes** –UI Path

79% of business leaders think automation is **most effective** when it **complements humans**. –UI Path

How is RPA empowering human workers?

Work before robots

Work with robots

1. Accounts Payable (AP) clerks complete payments and manage expenses.

AP clerks receive, process, verify, and reconcile invoice data manually.

Now, robots automatically enter data, freeing AP clerks to focus on financial analysis.

2. Chief Data Officers (CDO) are responsible for utilizing the data within an organization as an asset.

The Chief Data Officer manually reviews and inputs data, received from a variety of reports.

Now, robots automatically find and correlate information, allowing the CDO to focus on data-based recommendations to improve company practices.

3. Human Resources (HR) Administrators maintain employee records and organization guidelines.

HR administrators manually manage and update employee data.

Now, robots automatically maintain employee data, allowing HR administrators to focus on improving company culture.

"In the longer term, RPA technology means people will have more interesting work. By freeing up a person's time, employees can now focus on more advanced and engaging tasks, and over time organizations can see lower turnover, higher employee morale, and increased internal innovations." -Deloitte
