## 1 Artificial Intelligence

The use of technology to perform human tasks.

**Use Cases:** Endless Possibilities

## 2 Augmented Intelligence

People + AI working together to enhance cognitive performance, including learning and decision making. -Gartner

**Use Cases:** All Businesses

## 3 Agentic AI

Autonomously makes decisions focused on complex goals, with limited supervision. - IBM

**Use Cases:** Human Resources, Security, Engineering

## 4 Generative AI

Can generate brand-new, unique content based on learned patterns and existing data.

**Use Cases:** Code Generation, Reporting, Chatbots & Virtual Assistants

## 5 Intelligent Document Processing

Automates tasks for document capture/scanning and classification by type, including data extraction, sharing, and routing.

**Use Cases:** Invoice Automation, Claims Processing, Fraud Detection

## 6 Intelligent Automation

The use of technologies like AI, business process management (BPM) and Robotic Process Automation (RPA) to automate processes.

**Use Cases:** Customer onboarding, Invoicing, Inventory Management

For a typical mid-sized business, (100-999 employees) AI can save \$440,000 per year by automating invoice processes.<sup>2</sup>  
- BillTrust

73% of companies waste time on manual tasks that AI can automate.<sup>3</sup>  
- Vena Solutions

AI is expected to improve employee productivity by 40%.<sup>4</sup>  
- PWC
